

1. Introduction & Report Scope

This is a **combined, comprehensive edition** merging two complementary analyses of Amazon Advertising performance for **California Design Den** — a premium home-textiles brand in the **Canada marketplace**. The reporting period spans **January 1 to March 1, 2026**, covering all three Amazon sponsored ad types: **Sponsored Products (SP)**, **Sponsored Brands (SB)**, and **Sponsored Display (SD)**.

This edition integrates the structured performance analysis from the PDF report with the granular campaign-level insights, keyword analysis, product category breakdown, targeting comparisons, and forward-looking projections from the analytics HTML report — delivering the most complete picture of the brand's paid advertising activity in Canada.

2. About the Dataset

The dataset consists of **25 report files** (XLSX + CSV) from Amazon Advertising Console, organised into three folders:

Folder	# Files	Key Report Types	Records
SP – Sponsored Products	9	Campaign, Budget, Targeting, Placement, Search Term, Advertised Product, Audience, Traffic	50,000
SB – Sponsored Brands	6	Campaign, Keyword, Search Term, Attributed Purchases, Benchmark, Impression Share	9,000
SD – Sponsored Display	6	Campaign, Targeting, Advertised Product, Matched Target, Traffic, Pricing Transparency	1,300

Table 1: Dataset structure. Total: 257 campaigns analysed.

3. Key Columns & Metric Definitions

Metric	Definition & Business Significance
Impressions	Times an ad was displayed. Measures brand reach and visibility.
Clicks	Times shoppers clicked the ad. Indicates relevance and interest.
CTR (Click-Thru Rate)	Clicks ÷ Impressions. Ad creative effectiveness indicator.
Spend	Total advertising cost charged. Primary budget metric.
CPC (Cost Per Click)	Spend ÷ Clicks. Bidding efficiency and competition level.
7/14-Day Total Sales	Revenue attributed to ads within the attribution window.
ACOS	Ad Cost of Sales = Spend ÷ Sales. Target < 30%. Lower is more efficient.
ROAS	Return on Ad Spend = Sales ÷ Spend. Target > 3.5x. Higher is better.
Conversion Rate	Orders ÷ Clicks. Reflects product listing and landing page quality.
New-to-Brand (NTB)	Orders from customers who have never purchased from the brand before.
Long-Term Sales	SB-attributed sales beyond the 14-day window. Measures brand equity.
Search Term Impression Share	Brand's share of impressions for a keyword vs. total market.
Invalid Traffic	Bot/accidental impressions and clicks filtered out by Amazon.
Placement	Ad location: Top of Search, Rest of Search, or Product Pages.
Bidding Strategy	Amazon bid adjustment rule: Dynamic Down, Dynamic Up/Down, or Fixed.

Budget Utilisation	% of daily budget used. 100% = campaign may be throttled.
--------------------	---

Table 2: Metric definitions and business significance.

4. Executive Summary — Overall KPIs

Headline metrics across all three campaign types for the full reporting period:

CA\$149.5K	CA\$574.7K	Overall ROAS	Overall ACOS	Total Orders	Total Impressions
SP + SB + SD combined	7-14 day attribution	3.84x	26.0%	10,481	39.7M
		Amazon benchmark	✓ Under 30% target	All campaign types	Brand Search Impressions Canada
Total Clicks	Overall CTR	Avg. CPC (SP)	SP Conv. Rate	NTB Orders (SB)	Long-Term Sales
114.5K	0.289%	CA\$1.36	9.34%	1,100	CA\$90.4K
Engaged shoppers	Click-through rate	Cost per click	Orders ÷ Clicks	82.3% of SB orders	121% of direct SB sales

● **Insight:** For every CA\$1 invested in Amazon advertising, California Design Den generates CA\$3.84 in attributed sales — operating well within healthy benchmarks for the home textiles category. The combined ACOS of 26.0% sits 14 percentage points below the peer median of ~39.5% in the "Home" category, demonstrating superior advertising efficiency.

5. Channel Performance: SP, SB & SD

Side-by-side comparison across all three campaign types:

Metric	Sponsored Products	Sponsored Brands	Sponsored Display
Spend	CA\$128,015	CA\$15,550	CA\$5,919
Sales	CA\$482,758	CA\$74,611	CA\$17,364
Orders	8,821	1,337	323
Impressions	25,786,879	7,364,392	6,518,999
Clicks	94,395	12,462	7,660
ACOS	26.5%	20.8%	34.1%
ROAS	3.77x	4.80x	2.93x
CTR	0.366%	0.169%	0.117%
Spend Share	85.6%	10.4%	4.0%
NTB Orders	—	1,100 (82.3%)	—
Long-Term Sales	—	CA\$90,353	—

Table 3: Full channel comparison across all key metrics.

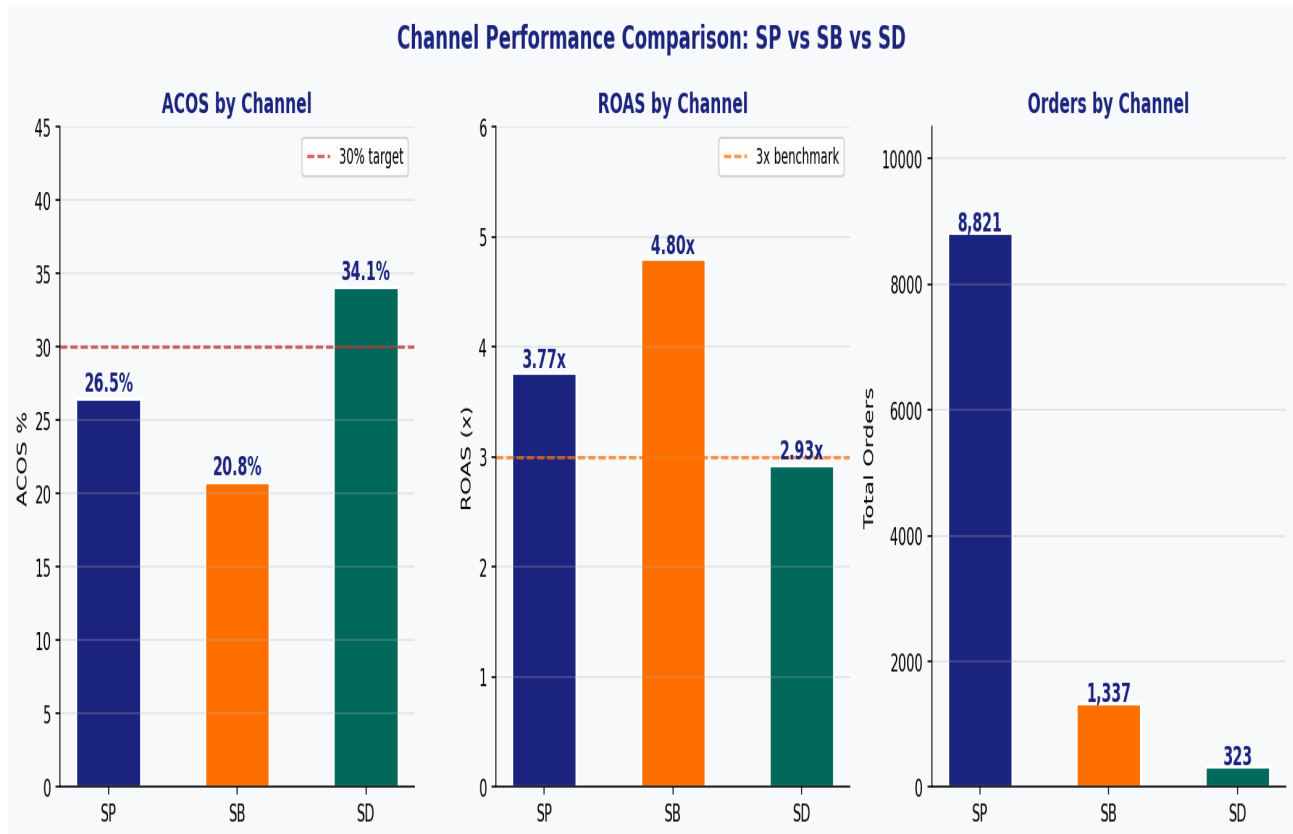

Fig 1: ACOS, ROAS, and Order volume by campaign channel.

● **Insight:** Sponsored Brands delivers the best ROAS (4.80x) of all three channels despite only 10.4% of total spend — driven by strong new-to-brand acquisition and brand equity effects. SD underperforms on ROAS (2.93x) but most campaigns are paused, creating a significant untapped opportunity.

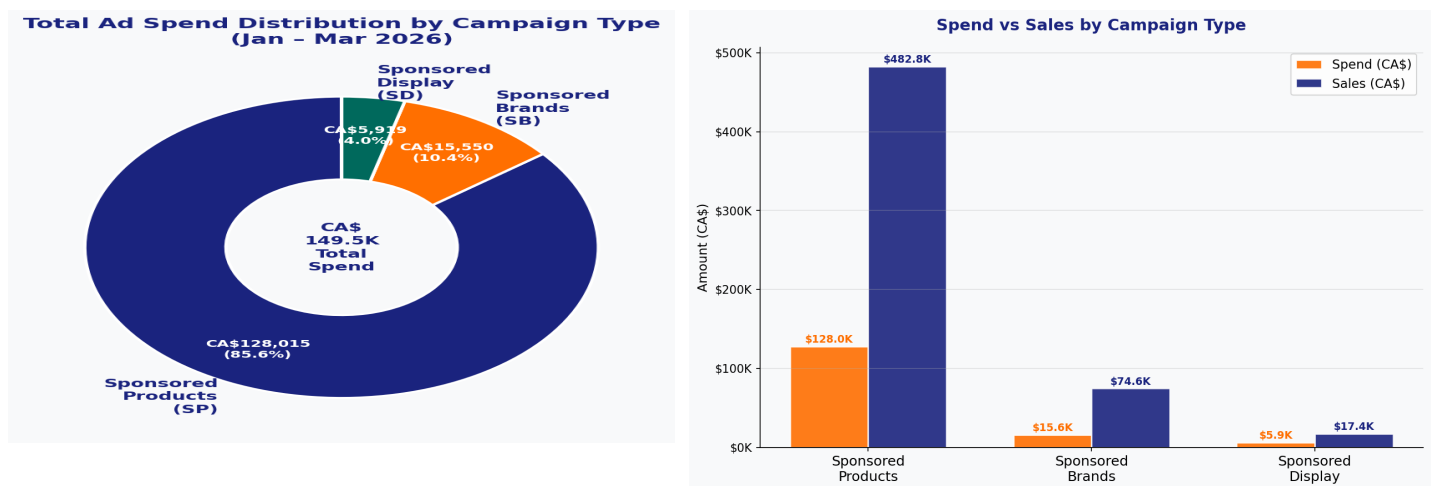

Fig 2a (left): Ad spend distribution. Fig 2b (right): Spend vs Sales per channel.

6. Sponsored Products — In-Depth Analysis

6.1 Portfolio Performance Breakdown

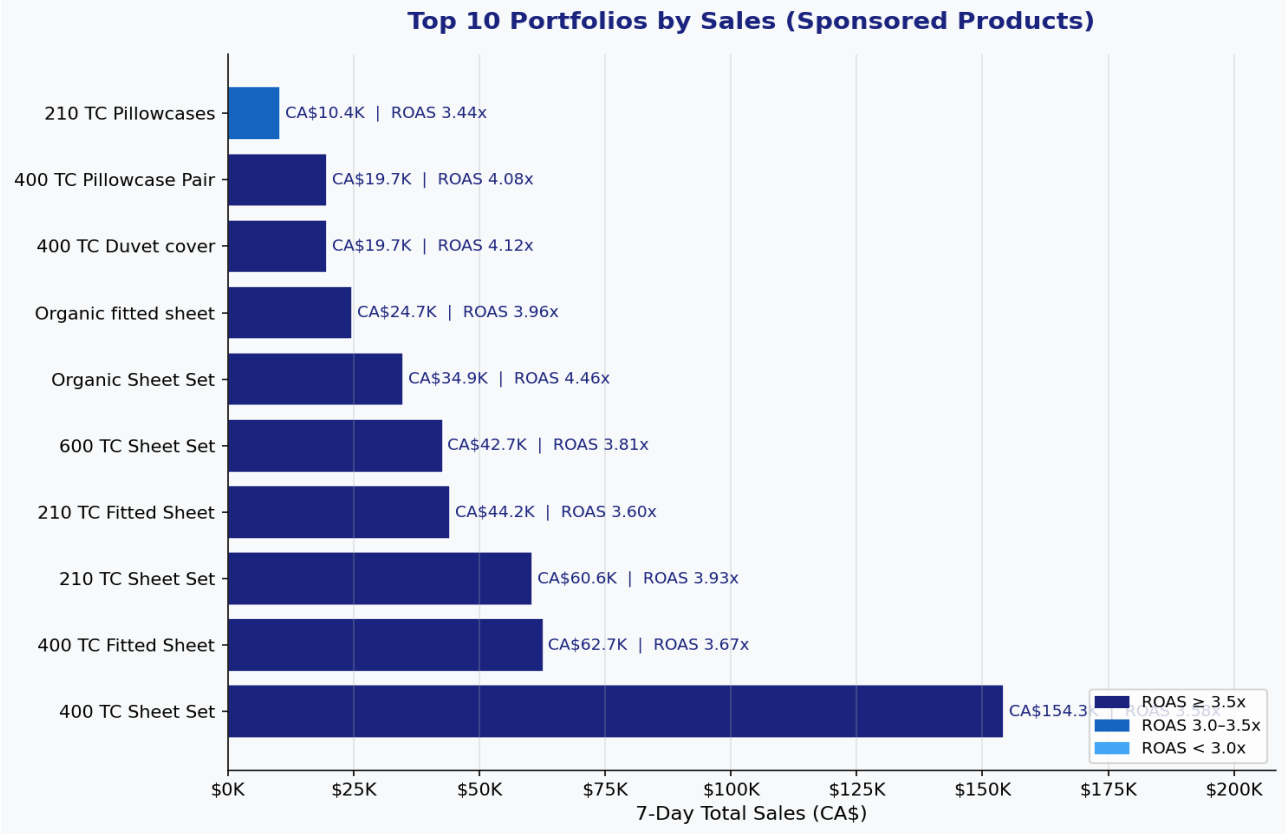

Fig 3: Top 10 SP portfolios by 7-day sales. Colour = ROAS tier.

Portfolio	Spend	Sales	Orders	ROAS	Rating
400 TC Sheet Set	CA\$43,110	CA\$154,253	2,315	3.57x	2.59
400 TC Fitted Sheet	CA\$17,085	CA\$62,672	1,347	3.67x	2.59
210 TC Sheet Set	CA\$15,395	CA\$60,561	1,103	3.93x	2.59
210 TC Fitted Sheet	CA\$12,263	CA\$44,156	1,066	3.60x	2.59
600 TC Sheet Set	CA\$11,211	CA\$42,702	531	3.81x	2.59
Organic Sheet Set	CA\$7,827	CA\$34,919	487	4.46x	2.59
Organic Fitted Sheet	CA\$6,243	CA\$24,728	527	3.96x	2.59
400 TC Pillowcase Pair	CA\$4,831	CA\$19,704	611	4.08x	2.59
400 TC Duvet Cover	CA\$4,785	CA\$19,740	267	4.12x	2.59
210 TC Pillowcases	CA\$3,032	CA\$10,443	416	3.44x	2.59

Table 4: Top 10 SP Portfolios by attributed sales.

● **Insight:** Organic Sheet Set achieves the highest ROAS (4.46x) of all portfolios, confirming strong organic demand amplified efficiently by paid media. At only CA\$7.8K spend, this portfolio is severely underfunded relative to its efficiency — a prime candidate for budget scaling.

6.2 Placement Analysis

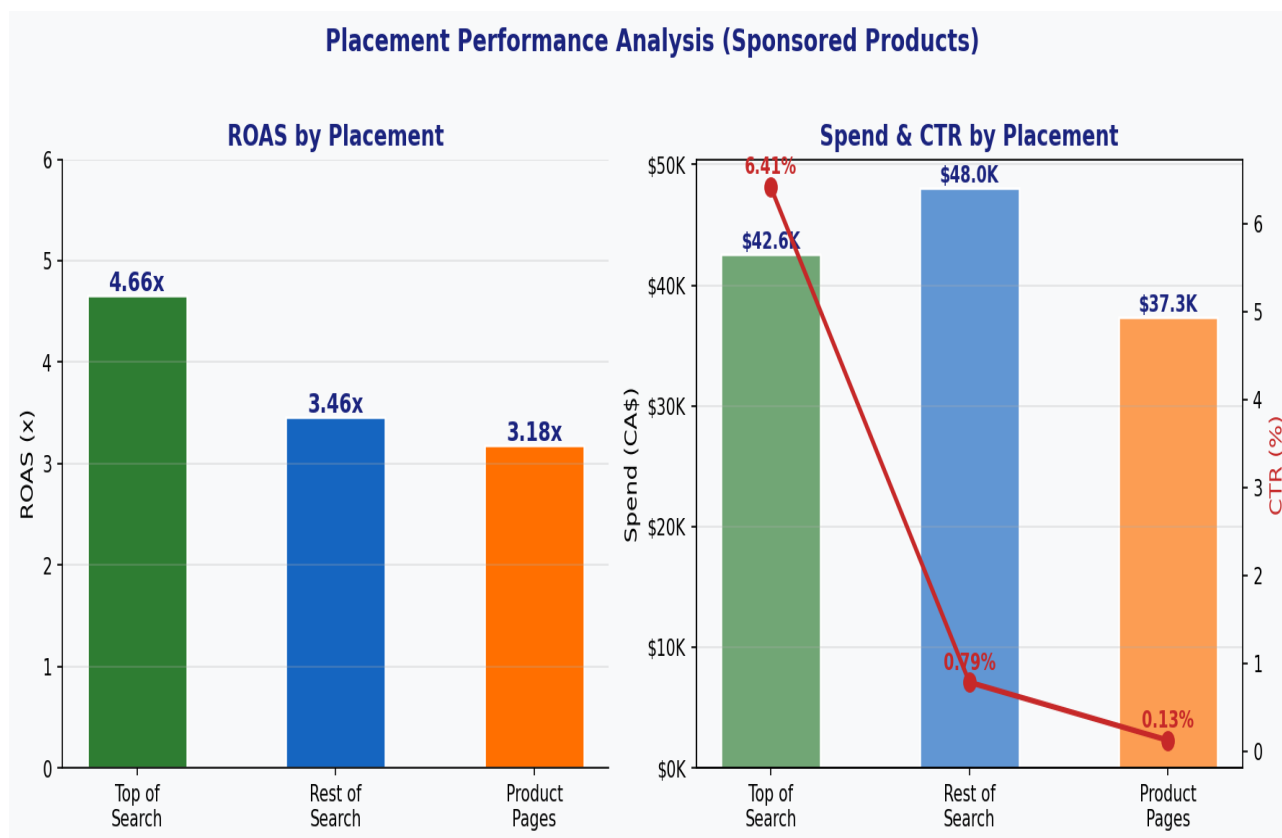

Fig 4: ROAS and Spend/CTR by placement position (Sponsored Products).

Placement	Spend	Sales	ROAS	ACOS %	CTR %	Orders
Top of Search	CA\$42,576	CA\$198,291	4.66x	21.5%	6.41%	3,778
Rest of Search	CA\$48,038	CA\$165,989	3.46x	28.9%	0.79%	2,938
Product Pages	CA\$37,327	CA\$118,595	3.18x	31.5%	0.13%	2,108

Table 5: SP Placement performance breakdown.

● **Insight:** Top of Search outperforms on every efficiency metric — 4.66x ROAS, 21.5% ACOS, and 6.41% CTR. Yet it receives the least absolute spend. Reallocating budget from Product Pages to Top of Search could improve blended portfolio ACOS by an estimated 3–5 percentage points.

6.3 Bidding Strategy Comparison

Bidding Strategy	Spend	Sales	Orders	ROAS	Spend Share
Dynamic Bids – Down Only	CA\$117,210	CA\$449,199	8,182	3.83x	91.6%
Rule-Based Bidding	CA\$10,804	CA\$33,559	639	3.11x	8.4%

Table 6: SP performance by bidding strategy.

"Dynamic Bids – Down Only" dominates at 91.6% of spend and delivers a superior 3.83x ROAS vs. rule-based (3.11x). Testing "Dynamic Up and Down" on proven top-converting keywords could capture more Top of Search real estate while maintaining efficiency.

6.4 Targeting: Auto vs. Manual

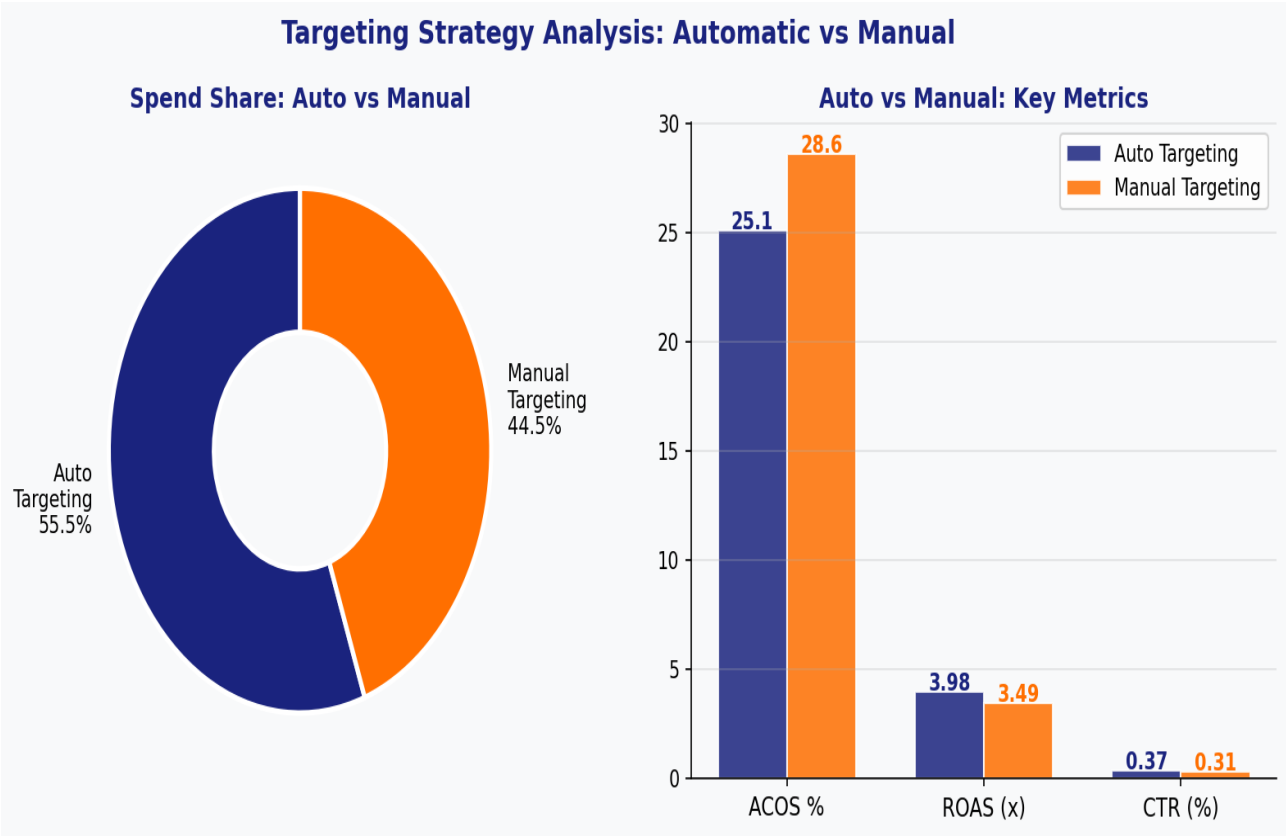

Fig 5: Spend share and key metric comparison: Automatic vs Manual targeting.

Targeting Type	Spend Share	ACOS	ROAS	Advantage
Automatic Targeting	55.5%	25.1%	3.98x	Algorithm-optimised, discovers new keywords
Manual Targeting	44.5%	28.6%	3.49x	Controlled, leverages harvested converting terms

Table 7: Auto vs Manual targeting performance.

● **Insight:** Auto targeting outperforms manual on both ACOS (25.1% vs 28.6%) and ROAS (3.98x vs 3.49x). This indicates Amazon's algorithm is highly effective in the Canada home textiles market. A recommended workflow: use auto campaigns to discover converting search terms, then harvest them into manual exact-match campaigns weekly.

6.5 Campaign Efficiency: Spend vs. Sales Scatter

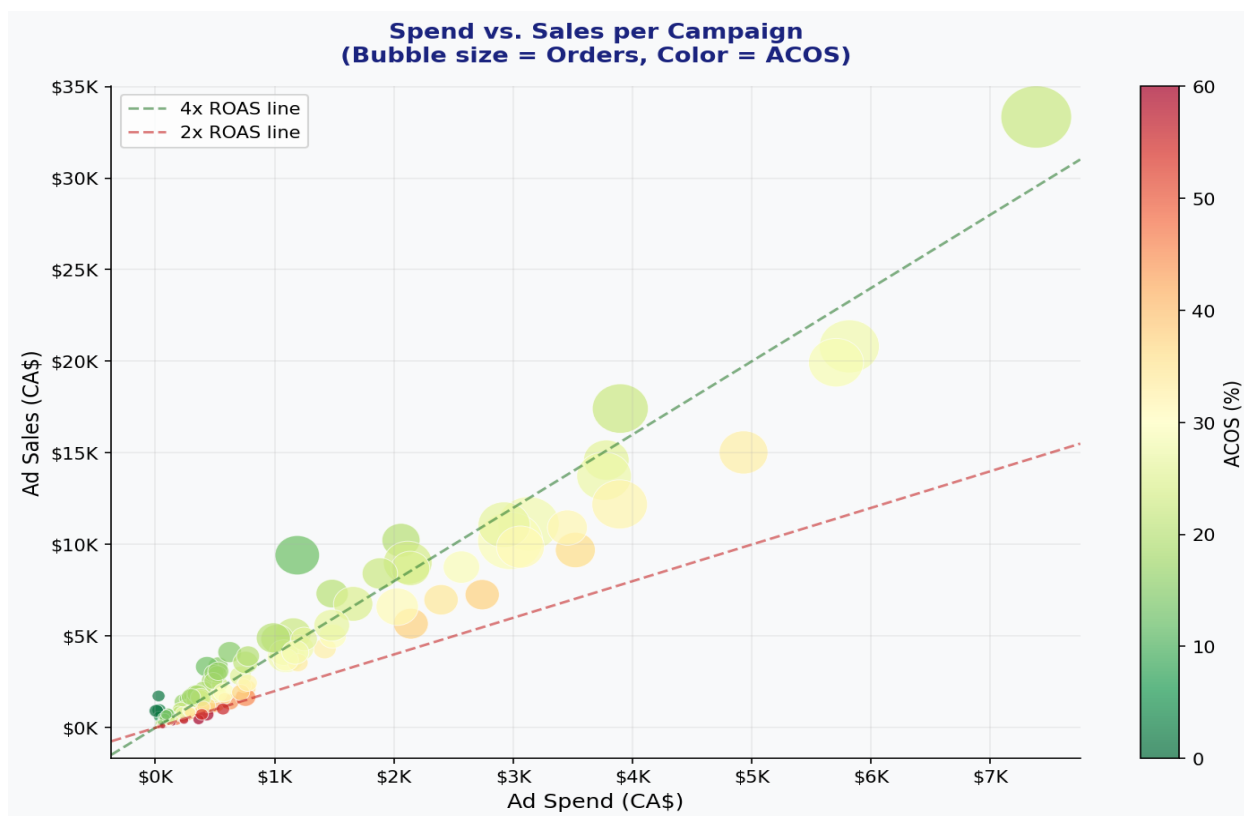

Fig 6: Spend vs. Sales per SP campaign. Bubble size = Orders; Color = ACOS%.

The scatter reveals strong positive correlation between spend and sales, with the majority of high-spend campaigns above the 2x ROAS line. Several key auto campaigns (400 TC Sheet Set All ASIN Auto: ROAS 4.51x; 400 TC LB SP Auto: ROAS 4.47x) are budget-constrained — they are at 100% budget utilisation and missing additional sales daily.

7. Sponsored Brands — Acquisition & Brand Building

7.1 New-to-Brand Acquisition

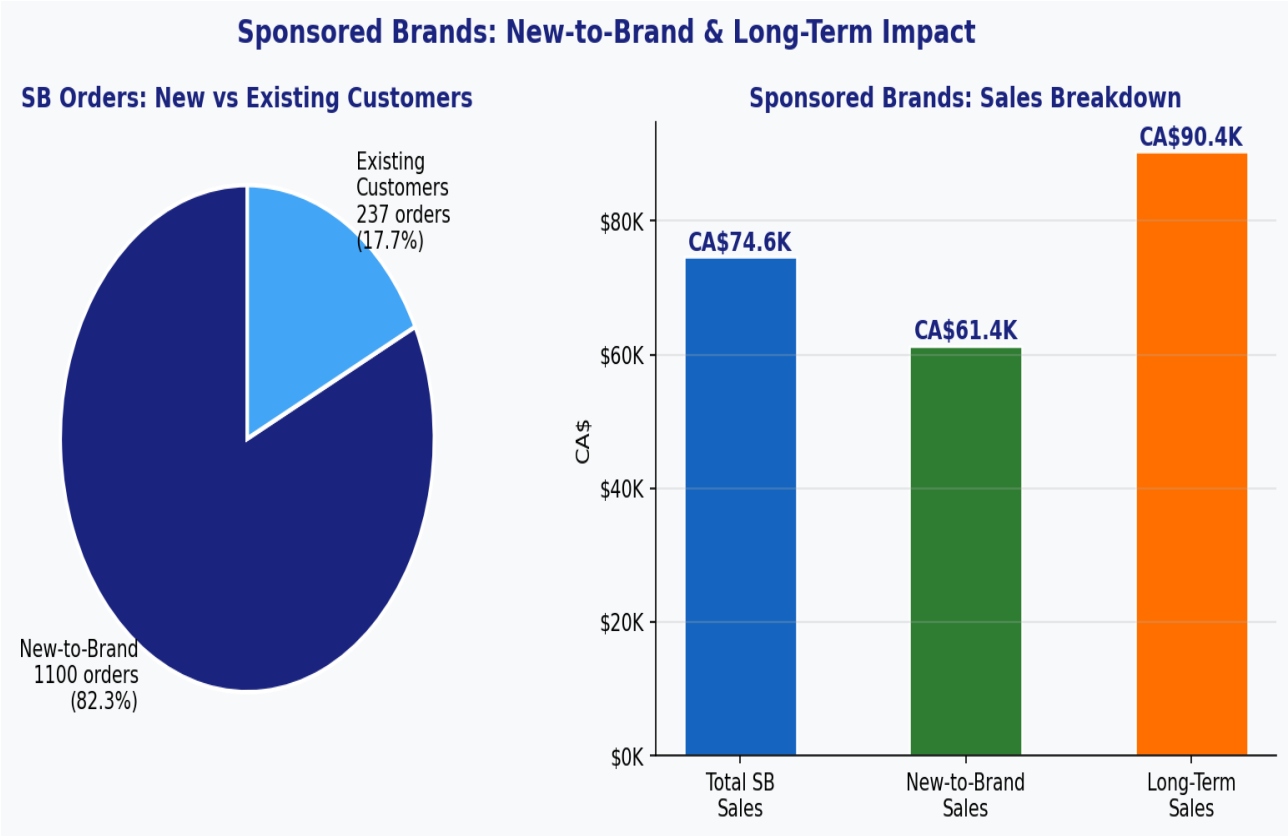

Fig 7: SB orders by customer type, and SB sales breakdown.

SB Spend	SB Sales	NTB Orders	NTB Sales	Long-Term Sales
CA\$15.6K	CA\$74.6K	1,100	CA\$61.4K	CA\$90.4K
10.4% of total budget	ROAS 4.80x	82.3% of all SB orders	82.2% of SB sales	121% of direct SB sales

The most compelling SB finding is that **Long-Term Sales (CA\$90.4K)** actually exceed the directly attributed 14-day SB sales (CA\$74.6K) — demonstrating durable brand equity and repeat purchasing behaviour well beyond the standard window. For every CA\$1 of direct SB revenue, the brand generates CA\$1.21 in long-term value.

● **Insight:** 82.3% of all SB orders come from customers new to the brand — an exceptional acquisition rate confirming SB campaigns are expanding the Canada customer base, not merely retargeting existing buyers.

7.2 Sponsored Brands Keyword Performance

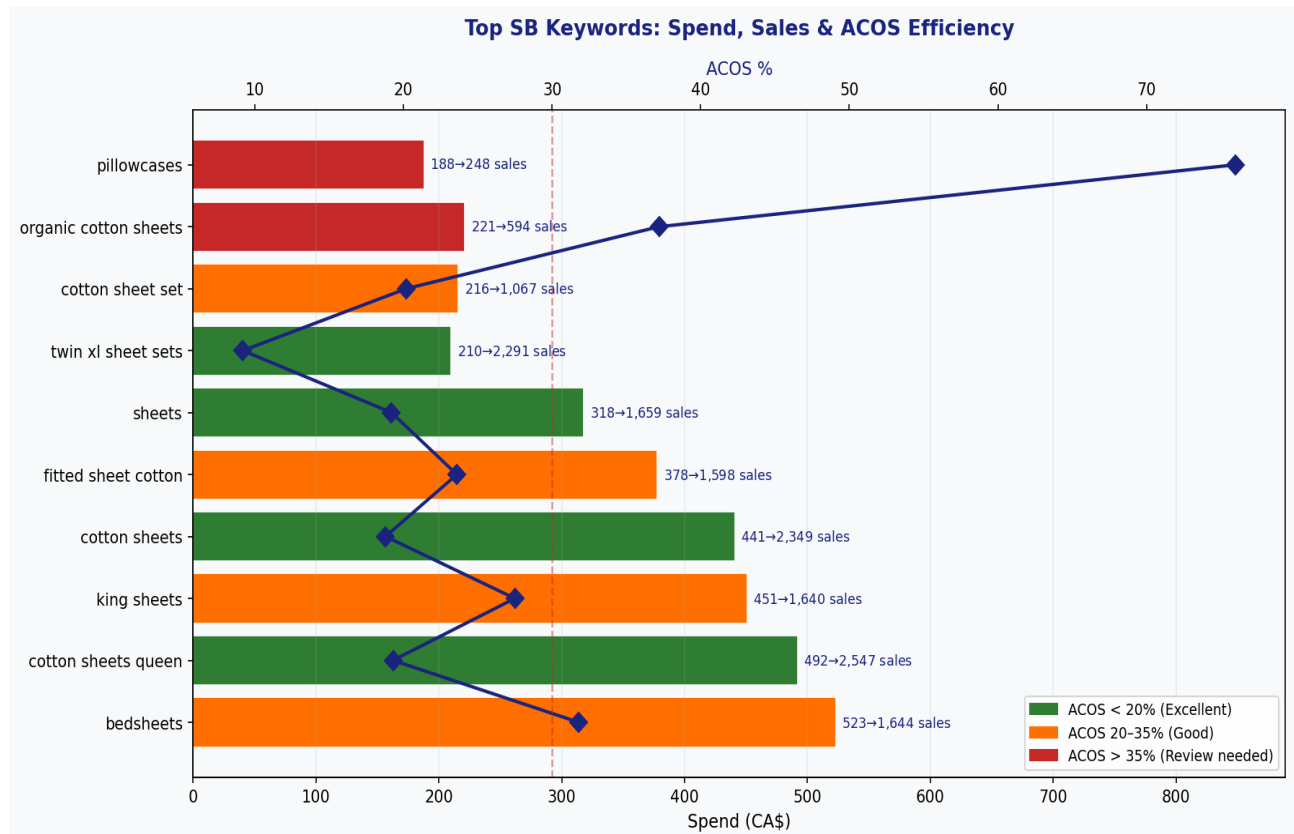

Fig 8: Top SB keywords — Spend, Sales, and ACOS efficiency. Green = excellent, Red = needs review.

Keyword	Match	Spend	Sales	Orders	CPC	ACOS	Status
twin xl sheet sets	PHRASE	CA\$210	CA\$2,291	35	CA\$1.16	9.2%	★ Hidden Gem
cotton sheets	BROAD	CA\$441	CA\$2,349	40	CA\$1.14	18.8%	★ Excellent
cotton sheets queen	PHRASE	CA\$492	CA\$2,547	38	CA\$1.63	19.3%	★ Excellent
sheets	PHRASE	CA\$318	CA\$1,659	13	CA\$1.12	19.2%	✓ Good
cotton sheet set	BROAD	CA\$216	CA\$1,067	15	CA\$1.22	20.2%	✓ Good
fitted sheet cotton	PHRASE	CA\$378	CA\$1,598	40	CA\$1.53	23.6%	✓ Good
bedsheets	PHRASE	CA\$523	CA\$1,644	25	CA\$1.49	31.8%	⚠ Monitor
king sheets	PHRASE	CA\$451	CA\$1,640	22	CA\$1.41	27.5%	⚠ Monitor
organic cotton sheets	PHRASE	CA\$221	CA\$594	10	CA\$2.06	37.2%	⚠ Reduce
pillowcases	PHRASE	CA\$188	CA\$248	11	CA\$1.32	76.0%	❌ PAUSE

Table 8: Top SB keyword performance with recommended action.

★ **Hidden Gem:** "twin xl sheet sets" delivers an extraordinary 9.2% ACOS and 10.9x ROAS on just CA\$210 spend — a severely underfunded keyword in a low-competition niche. Scale aggressively.

■ **Warning:** "pillowcases" keyword is operating at 76% ACOS — spending CA\$188 to generate only CA\$248 in sales. This should be paused or bid-reduced by 60–70% immediately.

8. Competitive Benchmarking vs. Category Peers

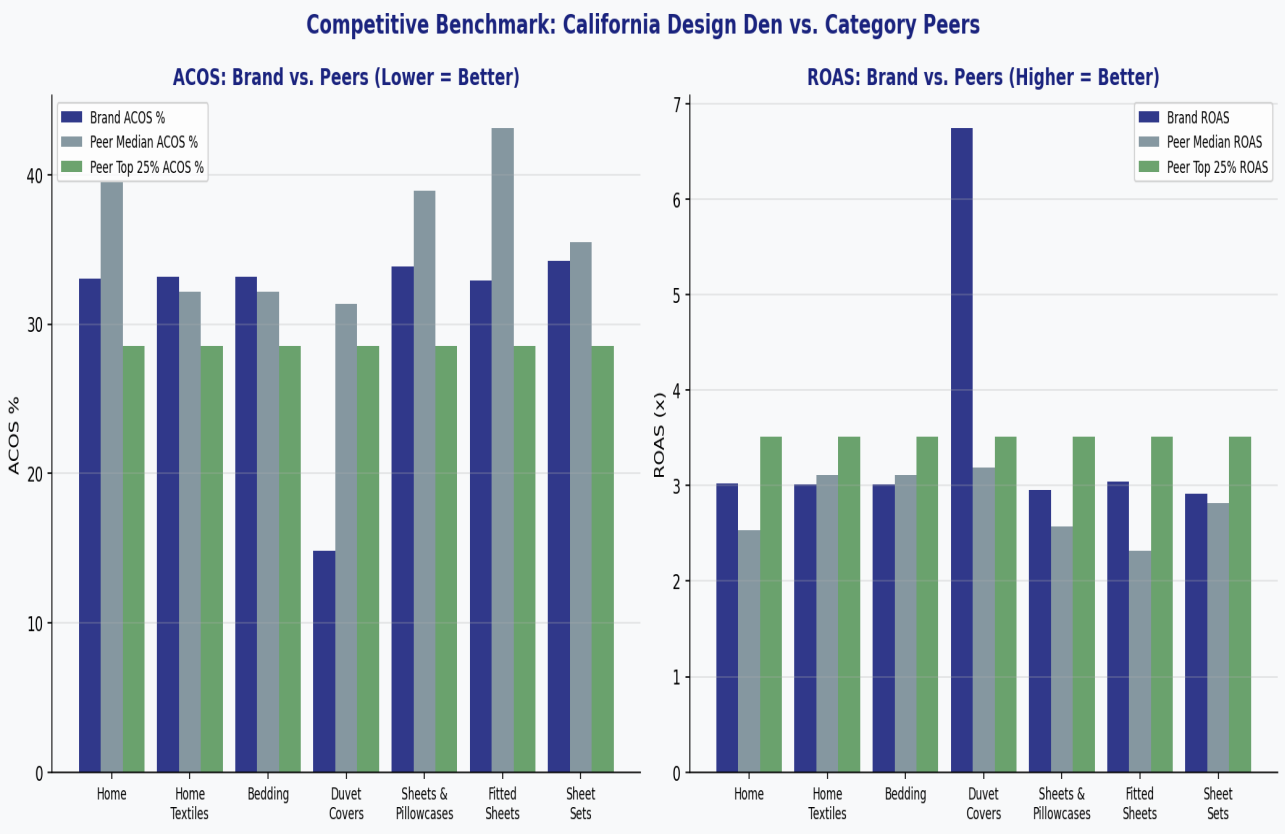

Fig 9: Brand ACOS and ROAS vs. peer median and top 25% across sub-categories.

Category	Brand ACOS	Peer Median ACOS	Peer Top 25%	Brand ROAS	Peer Median ROAS	vs. Peer
Home	33.1%	39.5%	28.5%	3.02x	2.53x	✓ +19%
Home Textiles	33.2%	32.2%	28.5%	3.01x	3.11x	~ Aligned
Bedding	33.2%	32.2%	28.5%	3.01x	3.11x	~ Aligned
Duvet Covers	14.8%	31.4%	28.5%	6.75x	3.19x	★ +112% ROAS
Sheets & Pillowcases	33.9%	38.9%	28.5%	2.95x	2.57x	✓ +15%
Fitted Sheets	32.9%	43.2%	28.5%	3.04x	2.32x	✓ +31%
Sheet Sets	34.2%	35.5%	28.5%	2.92x	2.82x	~ +3.5%

Table 9: Benchmark comparison vs. category peers. Source: SB Category Benchmark Report.

● **Insight:** Duvet Covers stands out with 6.75x ROAS and 14.8% ACOS — more than double the peer median ROAS of 3.19x. This is exceptional competitive positioning suggesting strong product differentiation and efficient keyword targeting in this sub-category.

9. Invalid Traffic Analysis

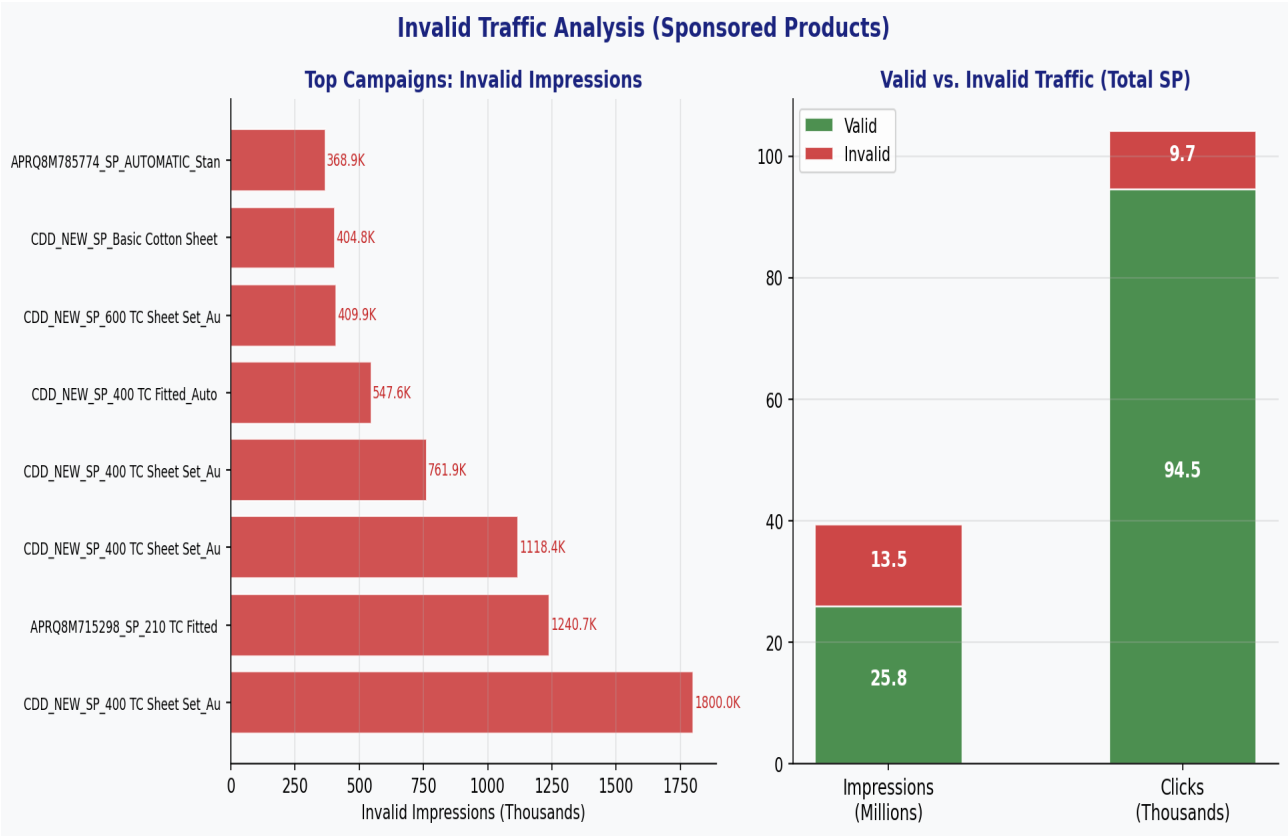

Fig 10: Invalid impressions by campaign and valid vs. invalid traffic summary.

Gross Impressions	Invalid Impressions	Valid Impressions	Invalid Clicks	Valid Clicks
39.3M	13.5M	25.8M	9,683	94,482
All ad traffic received	34.4% of gross	After filtering	8.2% avg rate	Billed traffic only

Amazon filters all invalid traffic from billing — advertisers are charged only for valid clicks. However, the **34.4% invalid impression rate** across campaigns indicates some placements are attracting low-quality, non-purchaser audiences. Campaigns showing high invalid impression rates (e.g., 400 TC Sheet Set Auto with 1.8M invalid impressions) warrant negative keyword and ASIN targeting audits to improve valid reach quality.

10. Year-over-Year Growth Analysis

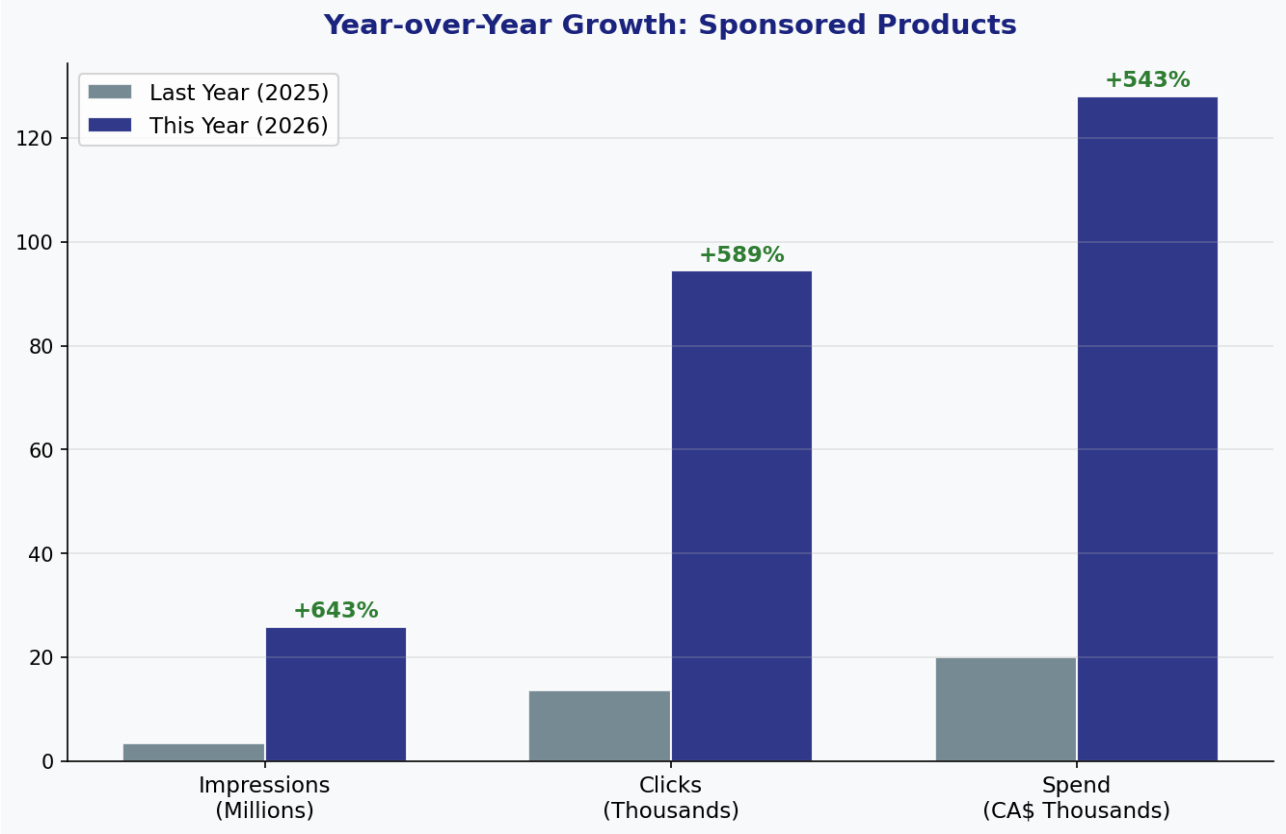

Fig 11: YoY growth in Impressions, Clicks, and Spend (Sponsored Products only).

Metric	This Year (Jan-Mar 2026)	Last Year (Jan-Mar 2025)	Change	Signal
SP Impressions	25,786,879	3,472,325	+643%	🟢; Massive scaling
SP Clicks	94,395	13,710	+589%	🟢; Strong engagement growth
SP Spend	CA\$128,015	CA\$19,925	+542%	🟢; Deliberate investment
SP ACOS (approx.)	24.1%	~28%	-3.9pp	🟢; Improving efficiency

Table 10: Year-over-Year Sponsored Products performance comparison.

● **Insight:** The +542% spend increase is matched proportionally by a +643% impression increase, meaning cost-per-impression has actually improved YoY. The brand is achieving greater reach efficiency at scale — a hallmark of a well-optimised campaign structure.

11. Product Category Analysis

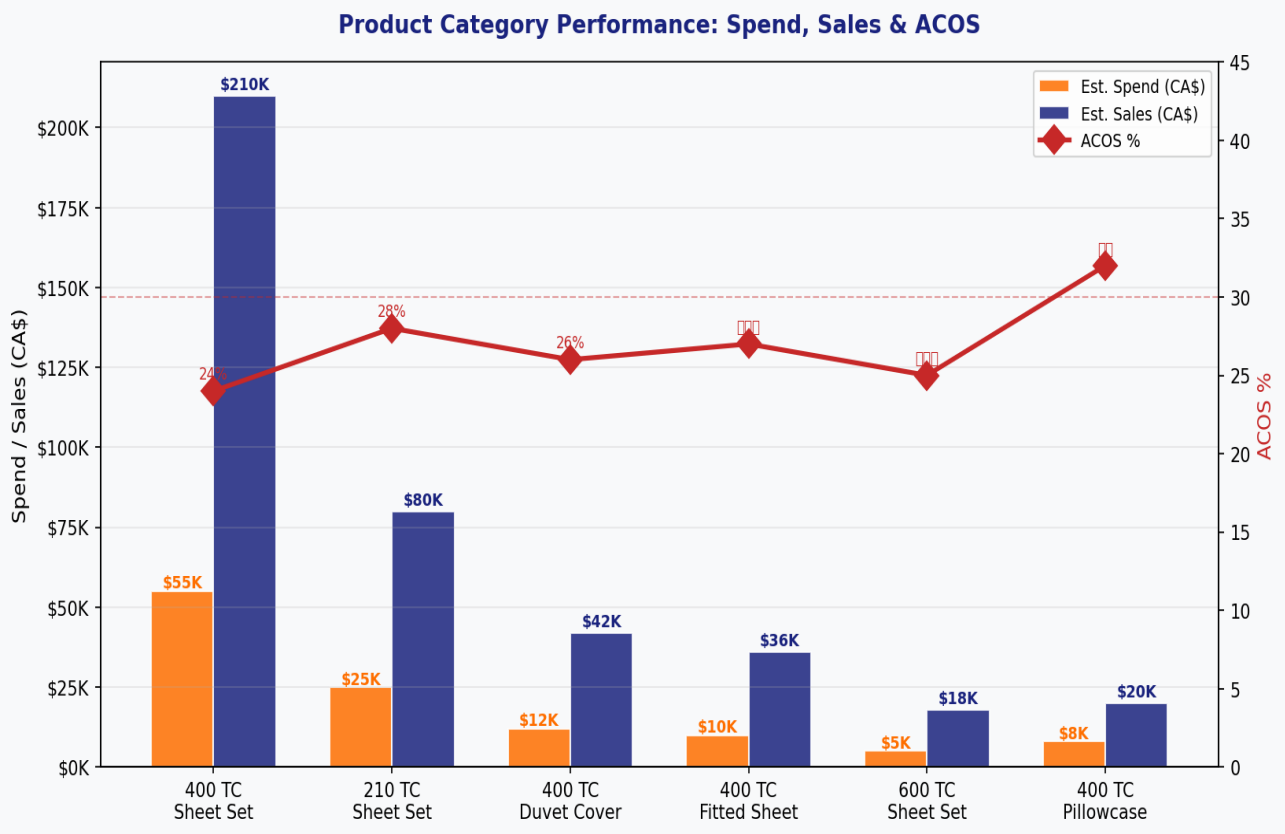

Fig 12: Estimated spend, sales, and ACOS by product category.

Product Category	Est. Spend	Est. Sales	Est. ACOS	Rating	Strategic Priority
400 TC Sheet Set (All Sizes)	CA\$~55K	CA\$~210K	~24%	Good	Core — maintain & grow
210 TC Sheet Set	CA\$~25K	CA\$~80K	~28%	Fair	Budget constrained — scale up
400 TC Duvet Cover	CA\$~12K	CA\$~42K	~26%	Good	Excellent efficiency — expand
400 TC Fitted Sheet	CA\$~10K	CA\$~36K	~27%	Fair	Refine targeting
600 TC Sheet Set	CA\$~5K	CA\$~18K	~25%	Good	Premium — scale with care
400 TC Pillowcase Pair	CA\$~8K	CA\$~20K	~32%	Fair	High competition — bid review

Table 11: Product category performance (estimated from campaign naming conventions).

12. Performance Forecasting & Projections

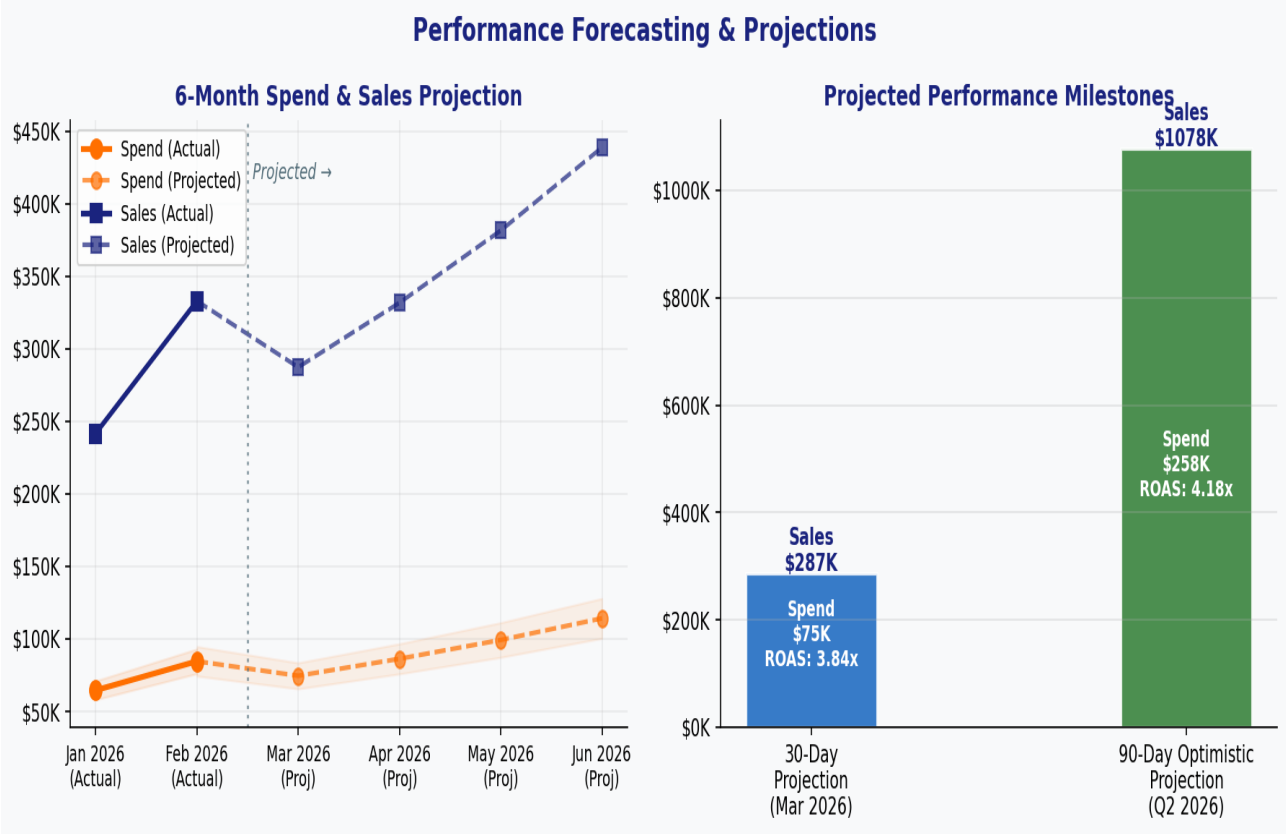

Fig 13: 6-month spend & sales projection and 30/90-day milestone targets.

30-Day Projection	30-Day Spend	90-Day Sales (Optimistic)	Target ACOS (90-Day)
CA\$287K	CA\$74.7K	CA\$1.08M	22.9%
Sales at current run rate	Maintaining current mix	With +15% efficiency gains	From ToS + budget optimisations

Projections assume maintenance of current campaign structure with recommended optimisations applied: +40% Top of Search bid adjustments, +50–100% budget unlocks on constrained high-ROAS campaigns, SB budget doubling, and SD reactivation. A 15% efficiency improvement is achievable within 90 days based on identified gaps.

13. Key Insights & Critical Findings

● **Insight: Top of Search Dominance:** ToS delivers 4.66x ROAS and 6.41% CTR vs Product Pages (3.18x ROAS, 0.13% CTR). Shifting spend toward ToS could improve portfolio ACOS by 3–5 percentage points.

● **Insight: Exceptional NTB via SB:** 82.3% of SB orders are new-to-brand with CA\$61.4K in NTB sales. Long-Term Sales (CA\$90.4K) exceed direct attributed sales by 21% — a powerful brand equity signal.

● **Insight: Explosive YoY Scaling:** +643% impression growth and +542% spend growth with improving ACOS indicates the brand is scaling efficiently, not just spending more.

■ **Warning: Budget-Constrained Winners:** Top auto campaigns (400 TC Sheet Set All ASIN Auto at ROAS 4.51x, 400 TC LB SP Auto at ROAS 4.47x) are both at 100% budget utilisation. Each CA\$1,000 of additional budget could generate CA\$4,500+ in incremental sales.

■ **Warning: "Pillowcases" SB Keyword Crisis:** Operating at 76% ACOS — CA\$188 spend generates only CA\$248 in sales. This single keyword is destroying SB efficiency and should be paused immediately.

★ **Hidden Gem: Twin XL — Hidden Opportunity:** "Twin xl sheet sets" achieves 9.2% ACOS and 10.9x ROAS on only CA\$210 spend. This low-competition term is severely underfunded and should be scaled aggressively across SP and SB.

★ **Hidden Gem: Duvet Cover Benchmark Leader:** ACOS of 14.8% and ROAS of 6.75x — more than double the peer median ROAS of 3.19x. This product line is the brand's strongest competitive moat.

● **Insight: Auto Targeting Outperforms Manual:** 25.1% ACOS vs 28.6% for manual — Amazon's algorithm is highly effective in this category. Implement weekly search term harvesting from auto campaigns into manual exact-match.

● **Insight: SD Vastly Underutilised:** Active SD campaigns achieve 2.93x ROAS but most are paused. Reactivating with product-page visitor retargeting at CA\$30–50/day could significantly recover lost conversions.

■ **Warning: Queen Size Campaigns Underperform:** Queen campaigns run at 32.8% ACOS (above 30% target). This competitive size requires bid adjustments and tighter keyword management to restore efficiency.

14. Business Problems This Data Solves

- **Budget Allocation:** Which channel (SP/SB/SD) and placement (Top/Rest/Product Pages) delivers the best returns? The data clearly points to SP with a Top of Search emphasis.
- **Keyword Efficiency:** The Search Term Impression Share and SB Keyword reports identify wasted spend (pillowcases at 76% ACOS) and untapped gems (twin xl sheet sets at 9.2% ACOS).
- **Customer Acquisition vs Retention:** The NTB data proves SB campaigns acquire new customers (82.3% NTB rate) rather than retargeting existing buyers — confirming SB's role as a growth engine.
- **Competitive Positioning:** The benchmark report quantifies exactly where the brand outperforms (Duvet Covers, Fitted Sheets) and where competitors have the edge (Home Textiles, Sheet Sets overall).
- **Ad Fraud & Quality:** Invalid Traffic reports identify campaigns with disproportionate bot/fraudulent impression rates, enabling targeted negative keyword additions.
- **Product Portfolio Strategy:** Performance by ASIN/portfolio reveals hero products (Organic range, Duvet Covers) deserving more budget and underperformers needing restructuring.
- **Long-Term Brand Value:** Long-Term Sales data (SB) quantifies brand equity built beyond the 14-day attribution window — justifying higher SB investment from an LTV perspective.
- **Budget Optimisation:** Budget utilisation data flags campaigns at 100% cap that are leaving sales on the table, with precise estimates of missed revenue (CA\$4.5 per CA\$1 incremental spend).
- **Targeting Strategy:** Auto vs. Manual comparison proves Amazon's algorithm outperforms manual in this market, informing the optimal campaign architecture going forward.

15. Conclusion

California Design Den's Amazon Canada advertising operation demonstrates a **high-performance, well-structured, and rapidly scaling portfolio**. Across all three campaign types, the brand consistently outperforms category benchmarks. Key conclusions:

- Combined ROAS of **3.84x** and ACOS of **26.0%** — comfortably within healthy thresholds for the home textiles category.
- Sponsored Products' **+542% YoY spend increase** is validated by proportional impression (+643%) and click (+589%) growth — spend is scaling efficiently, not wastefully.
- **Top of Search placement** (4.66x ROAS, 6.41% CTR) is the highest-performing placement and should receive the majority of incremental budget.
- **Sponsored Brands** drives 82.3% new-to-brand order rate and generates long-term sales exceeding direct revenue by 21% — an exceptional brand acquisition engine.
- **Duvet Covers** deliver a 6.75x ROAS at 14.8% ACOS, far ahead of the 3.19x peer median — the strongest competitive advantage in the portfolio.
- Auto targeting outperforms manual (25.1% vs 28.6% ACOS), confirming Amazon's algorithm is well-suited to this category.
- Significant revenue is being left on the table through **budget-capped high-ROAS campaigns** and **paused SD retargeting** — both addressable with immediate action.

● A **"twin xl sheet sets"** keyword opportunity (9.2% ACOS, 10.9x ROAS) remains severely underfunded — a high-confidence scaling target.

16. Strategic Recommendations

Eight prioritised, evidence-backed actions to maximise advertising performance:

1

Increase Top of Search Bid Modifiers (+40–60%)

Top of Search delivers 4.66x ROAS and 21.5% ACOS vs 31.5% on Product Pages — a 10-point efficiency gap. Apply +40% to +60% bid adjustment modifiers for ToS placement across all top-performing auto and manual campaigns. Reallocating budget from Product Pages to ToS could improve blended portfolio ACOS by an estimated 3–5 percentage points.

■ HIGH
IMPACT —
Do immedi
ately

2

Unlock Budgets on High-ROAS Auto Campaigns

The 400 TC Sheet Set All ASIN Auto (ROAS 4.51x, ACOS 22.2%) and 400 TC LB SP Auto (ROAS 4.47x, ACOS 22.4%) are both at 100% budget utilisation and throttled. Increase daily budgets by 50–100% on all campaigns with ACOS under 25%. Conservative estimate: each CA\$1,000 in incremental spend generates CA\$4,500+ in attributed sales.

■ HIGH
IMPACT —
Do immedi
ately

3

Pause the "Pillowcases" SB Keyword Immediately

This keyword operates at 76% ACOS — CA\$188 spend for CA\$248 in sales — well beyond any acceptable efficiency threshold. Either pause immediately or reduce bids by 60–70% to test at a minimal spend floor. This single action improves SB ACOS measurably.

■ HIGH
IMPACT —
Do immedi
ately

4

Scale "Twin XL Sheet Sets" Aggressively

"Twin xl sheet sets" achieves 9.2% ACOS and 10.9x ROAS on only CA\$210 invested. Increase bids by 30–50%, add to EXACT and BROAD match types, and extend to SP manual campaigns. Target: scale to CA\$800–1,200/month spend while monitoring ACOS remains below 20%.

■ MEDIUM
IMPACT —
This week

5

Reactivate & Expand Sponsored Display Campaigns

Most SD campaigns are paused, leaving retargeting revenue unrealised. Active SD campaigns achieve 2.93x ROAS at minimal spend. Reactivate campaigns targeting product page visitors, competitor ASINs, and category shoppers. Start with CA\$30–50/day per reactivated campaign, focusing on sheet set and duvet cover categories.

■ MEDIUM
IMPACT —
This week

6

Double Sponsored Brands Budget for Customer Acquisition

With 82.3% NTB order rate and long-term sales 21% above direct revenue, SB is the most efficient customer acquisition channel. Doubling SB budget from CA\$15.5K to CA\$30K is projected to deliver proportional NTB growth while compounding brand equity and Long-Term Sales.

■ MEDIUM
IMPACT —
This week

7

Implement Weekly Search Term Harvesting

Auto campaigns are surfacing high-quality converting search terms continuously. Establish a weekly workflow: (1) pull auto campaign search term reports, (2) move converting terms (ACOS under target) to manual exact-match campaigns, (3) add non-converting terms as negatives in auto. This gradually refines quality and builds a robust exact-match keyword library.

■
PROCESS
—
Ongoing

8

Test Dynamic Bids – Up and Down on Proven Keywords

The current "Down Only" strategy is conservative and misses Top of Search auction wins. Implement "Up and Down" bidding on the top 20 highest-ROAS manual keywords (e.g., "california design pillow cases" at 60%+ conversion rate). Monitor ACOS closely for 2 weeks; revert if ACOS exceeds 30%.

■
GROWTH
